

# Facilities and Asset Maintenance

**BAMA  
SERVICES**

Bama Services is a civil engineering, construction and industrial services business that provides industry-based employment for Indigenous people from across Queensland.

We have a strong customer base comprising both private and public sector clients, and a proven track record in executing challenging projects - challenging by virtue of complexity and remoteness. Bama is 100 per cent Indigenous owned, with a 76 percent Indigenous workforce. We are pre-qualified to a PQC 2 level with the Federal Government and have been pre-qualified to tender on projects in the high-risk industry of mining.

## Facilities and Asset Maintenance

Bama Services provides facilities maintenance solutions to a large number of government and non-government organisations throughout the Cairns and Cape York regions.

Bama Services has an experienced team that provides infrastructure and building maintenance, asset management and optimisation, and preventative and trade services. We offer high quality and complete infrastructure building management and services expertise. The facilities and asset maintenance teams specialise in the delivery of maintenance support services to the defence, mining, industrial, state and federal government, local council and private commercial sectors.

## Services include:

- Equipment sourcing and installation
- On-site long-term facilities maintenance
- 24/7 emergency call-out services
- Contract labour

Bama Services understands that critical assets require regular monitoring and care in order to safeguard reliability and performance. We can ensure that through a range of maintenance services we will reduce operational risk, provide a lower operational cost base and increase asset dependability.

Bama Services is a safe, competent, Indigenous owned and operated, scalable and competitive business that can tailor a solution to your maintenance requirements. When working with Bama you are partnering with a low-risk business. We are proud of our holistic support and wellbeing initiative which provides a case management approach addressing physical and mental health, nutrition, social and vocational training needs. With high performance teams we can guarantee that all measurable project targets are met on time and on budget.
